# Taylor's Disney Wish

## March 2010

Taylor is a happy 8 year old girl who was born with a neuro-genetic disorder called Angelman's Syndrome. There are many characteristics of this disease but the most debilitating are sleep disturbance and seizures. Taylor is non-verbal but communicates very well through gestures and sounds.

When at home, one of Taylor's favorite things to do is spend

time watching Disney characters on TV. Her favorite being Mickey Mouse!

Through generous fundraising efforts of BNI East and the Make-A-Wish Foundation of Eastern Ontario, Taylor and her family enjoyed a carefree week at "Give Kids the World" in Orlando, Florida. While there, they were able to capture many of the theme parks and attractions.

The cliché "a picture tells a thousand words" is absolutely the right for Taylor. Every picture received from the whole trip says it all! As her mom stated *"watching her expression when she fed the dolphins, to the excitement she expressed riding Splash Mountain, to sitting in the ocean and having the tide splash around her are only a few of the numerous moments that I will cherish forever. When she sits and looks at the many pictures, I see that beaming smile appear on her face and a twinkle in her eyes. Priceless for our family!"*
